DETAILED ACTION

Claims 1-15 are currently pending.

Restriction Requirement

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13,15, drawn to method of aligning protein sequences, classified in class 702, subclass 19.
- II. Claim 14, drawn to method of alignment, classified in class 702, subclass 19.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-II are related as independent methods which are not connected in design, operation or effect. The methods have different modes of operation, different steps, and are not disclosed as being used together. A reference teaching one method will not teach or suggest the other method.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1631

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
